PROFESSIONAL SUMMARY

Solution architect and presales lead in enterprise IT: banking platforms, data centers, infrastructure and security systems. 93 projects delivered in my own practice since 2013, each one starting from presales: client discovery, solution architecture, technical and commercial proposal, defence before the client.

C-level track record: I built a commercial bank's IT from the ground up and ran a city-scale billing platform serving 4M+ accounts. Today I design and run AI products: a multi-tenant AI SaaS built with AI and running on AI agents, now live in test operation. I own the path from the business problem to a working prototype, and the clean handover to the development team.

Seeking senior presales roles worldwide, remote or with relocation: presales solutions architect, solutions consultant, solutions engineer for infrastructure, data center and AI solutions.

CORE SKILLS

Presales & Consulting	Client discovery • Solution concepts • Technical proposals • RFP / RFI responses • PoC and prototypes • Demos for business • Deal costing • AI adoption roadmaps
Architecture & AI	Solution architecture • System design • AI strategy • LLM / RAG integration (Claude / OpenAI APIs) • Semantic search (pgvector) • AI agents • AI-assisted development • Workflow automation • Multi-tenant SaaS
Infrastructure & Cloud	Data-center design & migration • InfiniBand • Fibre Channel SAN • VMware vSAN • High availability / DR (RTO/RPO) • Veeam • Cisco networking • Linux (RHEL, Ubuntu) • Virtualization
Security & AV Systems	CCTV / video surveillance • Access control (PACS) • Fire & alarm systems • Structured cabling • Video conferencing • Microsoft-to-OpenSource migration
Delivery & Leadership	IT strategy • Technical program / project management • PMO (PMBOK) • Team leadership (~90) • Multi-million-budget ownership • Vendor & stakeholder management • ITIL • Tender / RFP • T&M and Fixed Price

EXPERIENCE

- Founder & AI Solution Architect, TenderSRB (AI SaaS)

2024-Present

 - Product:** working multi-tenant AI SaaS for public-procurement monitoring, built with AI and running on AI agents; live in test operation with first subscribers, before paid launch.
 - AI:** with one button, the Claude API reads the tender documents and lists the requirements, risks and deadlines. Semantic matching on pgvector and AI email digests are in development.
 - Architecture:** FastAPI service, Dockerized deployment on Ubuntu 24.04 VPS, tenant isolation at row level; CI with automated AI code review, deploy with one command and a check after each deploy; matches delivered to Telegram, email and a web dashboard; 33 architecture decision records.
 - Scale:** 55,291 tenders processed and 28,143 notifications sent by 29 September 2026.
 - Second system:** six tender bots on cloud infrastructure: monitoring of four procurement platforms, a combined digest, AI analysis of technical specifications, automated supplier requests.
 - Role:** architect and delivery lead across product, architecture, delivery and QA: I set the boundaries, assign tasks to people and AI agents, accept the result and own the assembly into a product.
- Founder & Principal Solutions Architect • Presales & Delivery Lead, IT Integration Consultancy (own company)

2013-Present

 - Portfolio:** 93 projects confirmed by contracts and acceptance acts; 66 counterparties (53 clients, 13 subcontractors and suppliers under management); peak annual turnover over \$2.4M.
 - Presales:** in-house deal-costing method that prices the deal before the bid: equipment, subcontracted works with margin, reserve, hourly rate; output is the minimum price and the loss threshold. Technical proposals and tender documentation; expert review of competing proposals; independent expert for public contracts.
 - Flagship (2023):** two-site architecture for critical IT infrastructure with a Tier III target site: ten facilities scored against nine weighted criteria (winner 0.911); surveyed and documented 132 units and 148 connections across six racks before any cable was pulled; 47 units relocated (22 Dell R660 servers on VMware vSAN, 1,452 TB of data), the rest kept running in place by design; metro cluster over dark fibre with synchronous storage replication and a new network core paired with the old one; RTO 15 to 30 min, RPO 15 min, inside a 30-minute downtime window; disaster recovery plan written and tested.
 - InfiniBand:** specified Mellanox ConnectX-5 VPI adapters for a compute cluster, and rejected a non-conforming delivery of the Ethernet variant (ConnectX-5 EN) at incoming inspection.
 - Cluster supply and support:** three-node compute cluster, 96 cores, two Xeon Gold 6242 per node, delivered with three-year onsite support; two-node HA cluster on Fibre Channel SAN (NetApp E2824HA, 28.8 TB usable, dual Brocade 16Gb fabric, QLogic HBAs) under a one-year technical support contract.

- **Facility layer:** UPS with static and external maintenance bypass, battery testing, ATS, generator tie-in, LV switchboards, earthing, load calculations and protection selectivity, in-row cooling with cold-aisle containment, commissioning and handover.
- **Open-source migrations:** led Microsoft-to-OpenSource transitions (RHEL, PostgreSQL, open mail stack), eliminating recurring Microsoft licensing costs (est. 30-50% licensing-TCO reduction).
- **Security & infrastructure:** CCTV, access control, fire/alarm and seamless WiFi for industrial sites, residential complexes and office buildings; designed data-center and video-conferencing infrastructure; ran competitive tender selection for servers and storage. Lead a delivery team.
- **Service contracts:** multi-year SLAs: 99.9% availability, 4-hour hardware replacement, 0.5-hour response; both T&M and Fixed Price delivered to signed acceptance.

Deputy General Director, National telecom / IT services group

2012-2013

- **Presales:** technical and commercial proposals for regional clients; technical documentation for public tenders.
- **Solution design:** utility-billing system for dozens of regions, reporting to the General Director.

IT Director, Large municipal IT operator

2011-2012

- **Scale:** IT for a city-scale billing platform covering ~80% of a major capital's housing stock, 4M+ customer accounts.
- **Delivery:** data-center relocation, disaster-recovery rebuild, 24/7 service desk, data-protection compliance, new data warehouse.

IT Director, Multi-branch commercial bank

2010-2011

- IT strategy and architecture reporting to the Chairman of the Board; restructured the IT organization; rolled out multi-branch core banking and a corporate internet bank integrated with card processing and external payment systems; merchant acquiring through integration with an external processor; ATM cash-in/out; ITIL service desk.
- Supervised the design of a payment-terminal network: 1,000 terminals across 374 railway stations.

Managing Director, IT, Major commercial bank (built from scratch)

2002-2010

- **Build:** the bank's entire IT from the ground up with a team of ~90 in three IT departments: core banking, card processing, ATM network, two head offices, 12 branches, 2 data centers.
- **Results:** when the portfolio grew to several parallel projects, set up a PMBOK-based PMO: branch-opening cost ~19% lower, timelines ~22% shorter; a technology committee cut time-to-market ~24%.
- **Reliability:** HA clustering with 10-minute RTO and host-to-host processing integration.

Chief Operating Officer, IT integration / fiber-optic company

1998-2002

- Opened a profitable regional branch and built a retail sales division.
- Led development and certification of a fiber-optic cable product and set up its manufacturing; delivered fiber-optic line projects from design to construction.

Earlier career: engineer → IT department head

- Engineering and IT management roles in banking, securities and IT integration: core banking implementation, back-office automation, exchange connectivity, processing-center infrastructure and structured cabling for financial institutions. Details on request.
- **Engineering foundation:** board design including part of a processor, and microcode; C, C++, assembler, Fortran and Pascal in early industrial and financial systems work.
- Side projects: video-on-demand platforms on set-top-box hardware with broadcast content, and SMS/MMS content delivery across national mobile operators.
