PROFESSIONAL SUMMARY

Solutions architect and technical delivery lead in enterprise IT — large-scale banking platforms, data centers, and infrastructure & security systems — now designing and shipping AI-powered products through AI-assisted development. I pair C-level strategic experience (built a commercial bank's IT from the ground up; ran a city-scale billing platform serving 4M+ accounts) with modern solution design: architecting LLM/RAG systems and driving them to a working product. I own architecture, delivery, and stakeholders end to end. Seeking remote senior/lead roles in solution architecture, AI consulting and integration (architecture level), technical program management, or fractional-CTO engagements.

CORE SKILLS

Architecture & AI: Solution architecture · System design · AI strategy · LLM / RAG integration (Claude / OpenAI APIs) · Semantic search (pgvector) · AI-assisted development · Workflow automation · Multi-tenant SaaS

Infrastructure & Cloud: Data-center design & migration · VMware vSAN · High availability / DR (RTO/RPO) · Veeam · Cisco networking · Linux (RHEL, Ubuntu) · Virtualization

Enterprise & Security Systems: CCTV / video surveillance · Access control (PACS) · Fire & alarm systems · Structured cabling · Video conferencing · Microsoft-to-OpenSource migration

Delivery & Leadership: IT strategy · Technical program / project management · PMO (PMBOK) · Team leadership (up to ~100) · Multi-million-budget ownership · Vendor & stakeholder management · ITIL · Tender / RFP

EXPERIENCE

Founder & Solution Architect — *TenderSRB (AI SaaS)*

2024 – Present

- **Designed & built end-to-end:** a multi-tenant AI SaaS for automated public-procurement monitoring in Serbia — solo, using AI-assisted development; currently in active development / pre-launch.
- **Architecture:** FastAPI service, PostgreSQL 16 with pgvector for semantic tender matching, Dockerized deployment on Ubuntu VPS; CI/CD pipeline with automated AI code review.
- **AI:** LLM pipeline (Claude API) that parses tender specifications and generates structured summaries and email digests.
- **Product:** multi-channel delivery — Telegram and Viber bots, web dashboard, AI-generated digests; architecture documented across 32 ADRs.
- **Ownership:** drove every stage — product, solution architecture, delivery, and QA.

Solution Architect & Delivery Lead — *IT Integration Consultancy (own)*

2013 – Present

- **Two-site data-center architecture (flagship):** designed a two-site architecture for critical IT infrastructure — ten facilities scored against nine weighted criteria, winner at 0.911; surveyed and documented 132 units and 148 connections across six racks before any cable was pulled; 47 units relocated, the rest kept running in place by design; metro cluster over dark fibre with synchronous storage replication and a new network core paired with the old one — RTO 15 to 30 min, RPO 15 min, inside a 30-minute downtime window; disaster recovery plan written and tested.
- **Open-source migrations:** led Microsoft-to-OpenSource transitions (RHEL, PostgreSQL, open mail stack), eliminating recurring Microsoft licensing costs (est. 30–50% licensing-TCO reduction).
- **Security & infrastructure:** 50+ projects in CCTV, access control, fire/alarm, and seamless WiFi; designed data-center and video-conferencing infrastructure; ran competitive tender selection for servers and storage. Lead a small delivery team.

IT Director — *Large municipal IT operator*

2011 – 2012

- **Scale:** ran IT for a city-scale billing platform covering ~80% of a major capital's housing stock — 4M+ customer accounts.
- **Delivery:** led data-center relocation, disaster-recovery rebuild, 24/7 service desk, data-protection compliance, and a new data warehouse.

Managing Director, IT — *Major commercial bank (built from scratch)*

2002 – 2010

- **Build:** built the bank's entire IT from the ground up with a team of ~100: core banking, card processing, ATM network, 12 branches, 2 data centers.
- **Results:** established a PMBOK-based PMO that cut branch-opening cost ~19% and timelines ~22%; a technology committee reduced time-to-market ~24%.
- **Reliability:** implemented HA clustering with 10-minute RTO and host-to-host processing integration.

IT Director — *Multi-branch commercial bank*

2010 – 2011

- Owned IT strategy and architecture reporting to the Chairman of the Board: multi-branch core banking, corporate internet bank, ATM cash-in/out, acquiring, ITIL service desk.

Earlier career — *Systems engineer* → *executive roles*

- Progressed across IT integration, telecom, and financial-sector infrastructure: back-office automation, exchange connectivity, fiber-optic line projects, and structured cabling for financial institutions. Details on request.
- Engineering foundation: C, C++, assembler, Fortran and Pascal in early industrial and financial systems work.

EDUCATION

MBA, General & Strategic Management — HSE University

Engineer, Computer Engineering — MEPhI (National Research University)

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

Recent (2021–2023): Foundations of Project Management (Google) · Google IT Support (5-course specialization) · Cisco Network Security · Red Hat RHEL Fundamentals · Python, JavaScript / HTML / CSS (foundational university courses)

Earlier: PMBOK / Project Management · ACCA F3 · SWIFT (×2) · Information Security fundamentals

LANGUAGES

English — Professional working proficiency (B2) · Russian — Native · Serbian — Elementary
